AI in a PDF - 130 KB coreset

The model is 500 AG News examples, not weights.

Train rows: 500 (125 per class)
Data: 132,798 bytes of JSON; labels: Business, World, Sports, Sci/Tech
Classifier: Complement Naive Bayes, trained when the viewer loads.
Test: 400 rows in mini-ai.html; 78.3% embedded / 74.3% fresh.
PDF: under 180 KB; overhead is page, base64 and structure.

The examples are in /TinyAIData metadata, not drawn on this page.
Open pdf-130k.html, load this file, and classify in the browser.
The full SHA-256 is in /TinyAISHA256.

Caveats: teacher labels from a 1.5B model; a 400-row test;
English news; bag-of-words; not an LLM.
